disability services

*FLE is a measure used to make comparable calculations across different institutions and programs. It is measured by taking the load of the student enrolled (instructional hours + practicum hours) and dividing by the full load of that program. This results in a comparable metric to be able to use across the system.

**This number is known to be far lower than actual number of NorQuest College credit students of Indigenous descent as it only reflects those who self-identified as Indigenous at the time of application.
